Typical configurations

Examples of common Galaxy Express configurations adapted to fit customer needs.

Digital Telephone Configuration

If you are a customer using legacy digital telephones you can protect your investment by utilizing Galaxy Express as the module for connecting your digital telephones. Your digital telephones can be local with your Galaxy Mini or at a remote location via the internet or your WAN.

Analog Device Configuration

Connecting your analog devices such as POTS telephones and FAX machines is easy. With FXS cards installed in Galaxy Express each module supports 8 or 16 analog devices. Analog devices can be local with your Galaxy Mini or at a remote location via the internet or your WAN.

PRI Configuration

If your office uses PRI circuits for DID numbers you can add them to your Galaxy Mini by installing a up to two single span PRI cards for a maximum of two PRI circuits per module.
