E-MetroTel

Why E-MetroTel For Hospitality Customers?

Scalable, integrated solutions.

E-MetroTel's Hospitality Values

PMS/HOBIC Interoperability

Seamless integration with property management and billing systems.

Perpetual License

Buy once. No recurring premium throughout the product life cycle.

On-site 911 Notification.

Internal response team immediately notified when anyone dials 911.

Multi-legacy Support.

Investment protection in wiring and telephones through re-use.
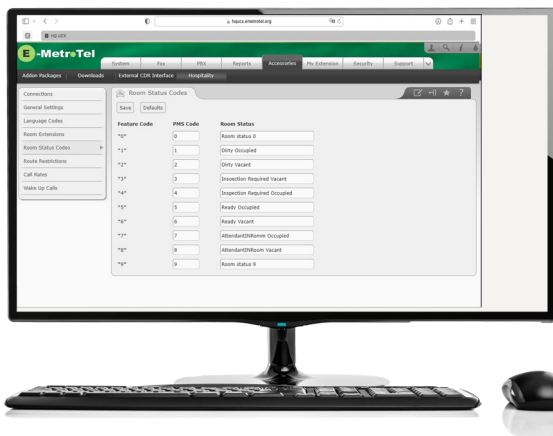

On-site Appliance.

Consistent with hospitality needs for uninterrupted communications.

Infrastructure Simplification.

Green solutions. Simplified wiring to the distribution closet.

Integrated Hospitality Management

PMS & HOBIC Interface. Easy to configure integration with hospitality management software.

Multi-language integration. Support for English and European languages.

Mapping Rooms to Extensions. Room numbers and extensions can be different so that room numbers are protected.

Room Extension Details. Used to map Room Number and Name to the extension number.

**Room Status Codes.** Used to report the condition of rooms.

Route Restrictions. Protects outbound routes, long distance, emergency dialing, etc.

Call Rates. Set Long distance rates for billing.

**Wakeup Calls.** Schedule guest wakeup calls.

Reuse existing wiring. Simplify new installations.

Most hotels have analog phones in the guest rooms because
they are low cost, easily replaced and interchangeable.

Re-wiring or new builds.

For those that are re-wiring or for new builds, the FXS cards can be distributed on each floor using Galaxy Express chassis', reducing the overall copper wiring run lengths significantly, with each Express chassis connecting to the ethernet infrastructure to connect back to the UCX software in either a Galaxy Expand chassis or in a Cloud or virtualized environment.

Re-use existing analog wiring.

We offer a simple solution by placing one or more Galaxy Expand shelves in the Main Distribution room where all the 25 pair cable runs can be terminated on 16 port FXS cards.

Smart XSTIM Telephones.

When it comes to phones on the front desk, in the lobby, or even the back office, we have our standard assortment of Infinity 5000 series phones. The 5010W with its wireless connectivity and Bluetooth headset options and the 5008 and 5004, all using E-MetroTel's XSTIM protocol and no-touch provisioning.

More Info Here.

Smart XSTIM Telephones.

Hotels can save money by retaining current phones and replacing them gradually over time with E-MetroTel Infinity phones.
